

INTERNAL IMPLEMENTATION SPECIFICATION

ScaleSight × Fishwife

Supply Commitment Planning Workspace

Product & Technical Specification

Developer Implementation Guide for Wahib

Version 1.0 | Prepared October 2026

Not another system for Fishwife to operate.

Analysis maintained by ScaleSight. Decisions made with Fishwife.

Public context, synthetic operating inputs, centrally derived metrics and specialist-reviewed interpretation must remain distinct. This guide preserves the supplied source values and records unresolved implementation questions.

Document control

Owner / audience: ScaleSight / Wahib. Status: implementation baseline with explicit confirmation items. Source precedence: Fishwife Phase 1 governs business data and logic; Fishwife Phase 2 governs UX and exact experience copy; the NATURANA PDF governs structure and quality only. The explicit creation prompt governs deliverable requirements. No NATURANA operating content is reused. Public statements below are source-provided research, not a new verification of current websites.

Release gate: resolve the numeric/data gaps listed under Implementation Questions before presenting a fully calculated interactive demo. Preserve supplied canonical values meanwhile.

Executive summary

Build eleven desktop-first routes around four immediate decisions: Spanish Lemon REVIEW BUY, Rainbow Trout REALLOCATE, FBJ Salmon SPLIT and Basil Pesto Mussels RESEQUENCE. Add the seven-component Starter Pack dependency and five complete scenario narratives. The interface presents a prepared weekly analytical service, with read-only operational records and narrowly bounded teaching interactions. Cin7 retains transaction truth, Jampack supports execution, and Fishwife retains policy and final decisions.

Every repeated number must come from one canonical fixture and shared selectors. Unspecified costs, channel splits, timestamps, MOQs and allocation priorities must remain null or explicitly pending; do not fabricate them. All supplied detail appears in the technical sections and the source-preservation appendices.

01 Purpose & commercial objective

The strongest service statement is:

Cin7 remains Fishwife's system of record. Jampack keeps operational workflows moving. Fishwife's team owns the plan. ScaleSight maintains the analytical layer around that plan-monitoring where demand, supply, channel commitments and cash begin to diverge, comparing the available responses, and preparing the few decisions that deserve intervention.

And:

Not another system for Fishwife to operate.

And:

The planning workspace is the interface to ScaleSight's managed analytical capacity-not the product itself.

This preserves the same important principle used in the NATURANA specification: the workspace is the interface; ScaleSight maintains the analysis and the client retains the commercial decision.

02 What Fishwife already has

Fishwife is not an immature brand looking for its first inventory process.

Its current public stack/process is unusually clear:

Layer	What Fishwife publicly has
ERP / system of record	Cin7 for inventory, POs, sales orders, BOMs and purchasing records
Wholesale execution	Jampack AI automating wholesale PO processing, freight/order workflows and system synchronization
EDI	SPS Commerce
Warehouse / fulfillment	WMS / 3PL environment
Finance	QuickBooks
Working/planning layer	Google Sheets, Notion
Commerce	Shopify/e-commerce + Amazon
Quality/compliance	FoodLogiQ
Planning process	Monthly S&OP, demand-plan reconciliation, coverage, safety stock, production commitments
Planning org	Existing operations capability plus active buildout of Supply Planner / Director-level planning capability

Fishwife's current Supply Planner posting explicitly says Cin7 should be the current source of truth for PO status, quantity and dates; the role owns replenishment, coverage, safety stock, cannery production commitments, recovery, and supply inputs into monthly S&OP. Greenhouse (https://job-boards.greenhouse.io/shrimpgirlsincdbafishwifetinnedseafoodco/jobs/4414038009?utm_source=chatgpt.com)

The new Director of Supply Planning & Inventory is expected to reconcile demand and supply, set inventory policy, resolve gaps across capacity/cash/inventory, approve major commitments, define protected accounts, and build the reporting/system roadmap. Greenhouse (https://job-boards.greenhouse.io/shrimpgirlsincdbafishwifetinnedseafoodco/jobs/4434576009?utm_source=chatgpt.com)

Fishwife also uses Jampack. Jack Henry Delano publicly described Fishwife's stack as SPS Commerce, Cin7, QBO, Google Sheets, freight portals and email; Jampack now automates much of the wholesale operational workflow between those systems. LinkedIn (https://www.linkedin.com/posts/jack-henry-delano-64497a149_weve-scaled-from-3500-to-15000-retail-activity-7432171370408493056-TnSg?utm_source=chatgpt.com)

That gives us a very precise boundary.

Cin7 differs from ScaleSight

Cin7 remains:

what exists / what was ordered / what arrived / what is committed / transaction truth.

Jampack differs from ScaleSight

Jampack remains:

processing wholesale orders / logistics workflow / freight / syncing execution systems.

Fishwife planning team differs from ScaleSight

Fishwife owns:

policy / S&OP / final buy / supplier commitments / execution.

ScaleSight becomes

The continuously maintained analytical layer that determines which changes are important enough to challenge the current plan, compares the available responses, and prepares the decision for Fishwife.

That is the commercial gap.

I did **not** find public evidence of a separate managed analytical layer continuously performing that job for Fishwife. We should present that as the area ScaleSight adds-not claim Fishwife cannot already perform such analysis internally.

Fishwife describes itself as being in more than **11,000 stores**, including Whole Foods, Target, Costco and Wegmans. Jack Henry Delano separately described growth from roughly 3,500 to 15,000+ retail doors over the prior year. LinkedIn (https://www.linkedin.com/company/fishwife?utm_source=chatgpt.com)

The Director role says the company is growing across wholesale, club, Amazon, e-commerce and independent retail while inventory flows through global canneries and co-manufacturers. Greenhouse (https://job-boards.greenhouse.io/shrimpgirlsincdbafishwifetinnedseafoodco/jobs/4434576009?utm_source=chatgpt.com)

This creates four separate layers of complexity:

channel complexity > supplier complexity > commitment timing > cash exposure.

The job posting practically gives us the exact demo language: when supply becomes risky, the planner should evaluate **expedite, resequence, split or cut** and state what each option costs. Greenhouse (https://job-boards.greenhouse.io/shrimpgirlsincdbafishwifetinnedseafoodco/jobs/4414038009?utm_source=chatgpt.com)

That means our demo should show those decisions-not generic forecasts.

03 Where ScaleSight sits

This should eventually be grounded in their actual operating stack.

INPUT / EXISTING SYSTEMS

Cin7

Jampack

SPS Commerce

WMS / 3PL

Shopify

Amazon

Google Sheets

sales forecasts

supplier readiness information

promotions / launches

Fishwife's current public materials support that ecosystem. Greenhouse (https://job-boards.greenhouse.io/shrimpgirlsincdbafishwifetinnedseafoodco/jobs/4434576009?utm_source=chatgpt.com)

decision Fishwife needs to make
what ScaleSight will monitor next
This directly follows the safer structure used in the NATURANA specification.

05 Verified public product / channel context

Fishwife's current DTC assortment and Build Your Own Bundle expose a broad tinned-fish portfolio, including tuna, salmon, trout, mussels, sardines, anchovies and mackerel. The bundle system supports 9-, 12- and 15-tin configurations plus subscriptions. Fishwife (https://eatfishwife.com/pages/bundles?utm_source=chatgpt.com)

For the actual planning model, I recommend **12 core finished-goods SKUs**. That is enough complexity without making the prospect inspect 40 rows.

Demo ID	Public product	Public DTC pack price	Public supply context
TUN-SL	Albacore Tuna with Spanish Lemon	\$32 / 3-pack	Bay of Biscay + South Africa; packed in Spain
TUN-SP	Albacore Tuna in Spicy Olive Oil	\$32 / 3-pack	Bay of Biscay + South Africa; packed in Spain
TUN-OO	Albacore Tuna in Olive Oil	\$32 / 3-pack	Spanish packed tuna
TUN-SG	Albacore Tuna with Soy Ginger	\$32 / 3-pack	Bay of Biscay + South Africa; Spanish cannery
SAL-GL	Gold Label Smoked Salmon	\$36 standard 3-pack	Kvarøy Arctic; canned in Washington
SAL-FBJ	Smoked Salmon with Fly By Jing Chili Crisp	\$39 standard 3-pack	Kvarøy Arctic; Washington cannery
TRT-ORIG	Smoked Rainbow Trout	\$33 standard 3-pack	Denmark; micro-cannery near Copenhagen
SAR-PL	Sardines with Preserved Lemon	\$32 / 3-pack	Cornwall/Iberian fisheries; Galicia
SAR-HP	Sardines with Hot Pepper	\$32 / 3-pack	Cornwall/Iberian fisheries; Galicia
MUS-BP	Mussels with Basil Pesto	\$32 / 3-pack	Southern Chile; packed in Galicia
MUS-SPG	Mussels with Sweet Pepper + Garlic	\$32 / 3-pack	Southern Chile; packed in Galicia
MAC-CHILI	Slow Smoked Mackerel with Chili Flakes	\$32 / 3-pack	Northeast Atlantic; public retailer material identifies Scotland packing

Those sourcing structures are based on Fishwife's current product pages. Fishwife (https://eatfishwife.com/products/albacore-tuna-with-spanish-lemon-3-pack?utm_source=chatgpt.com)

Two additional public SKUs can exist in the catalog but don't need to drive the first demo story:

Cantabrian Anchovies in EVOO - \$27 / 3-pack, and **Smoked Rainbow Trout with Red Chimichurri - \$33 / 3-pack**. Fishwife (https://eatfishwife.com/products/cantabrian-anchovies-in-extra-virgin-olive-oil?utm_source=chatgpt.com)

Important: these are **our safe internal demo IDs**, not claims about Fishwife's real internal SKUs.

This is where the demo becomes Fishwife-specific.

Target

Fishwife currently identifies these products at Target:

Smoked Salmon with Fly By Jing, Rainbow Trout, Spanish Lemon Tuna, Spicy Tuna, Olive Oil Tuna, Mackerel and Preserved Lemon Sardines. Fishwife
(https://eatfishwife.com/pages/target-store-locator?utm_source=chatgpt.com)

Whole Foods

Current Fishwife Whole Foods assortment displayed publicly includes Spicy Tuna, Olive Oil Tuna, Mackerel and Preserved Lemon Sardines. Fishwife
(https://eatfishwife.com/pages/whole-foods-store-locator?utm_source=chatgpt.com)

Costco

Fishwife lists an **exclusive Costco Spicy Tuna trio pack** and Smoked Rainbow Trout in select Costco locations. Fishwife (https://eatfishwife.com/pages/costco-store-locator?utm_source=chatgpt.com)

Kroger / Murray's

Current public Fishwife Kroger assortment includes Fly By Jing Salmon, Rainbow Trout, Mackerel, Preserved Lemon Sardines and Spicy Tuna. Fishwife
(https://eatfishwife.com/pages/kroger-store-locator?utm_source=chatgpt.com)

DTC

Fishwife has standalone tins, curated bundles, 9/12/15 Build Your Own Bundles and subscription frequencies of 30, 60 or 90 days. Fishwife
(https://eatfishwife.com/products/build-your-own-bundle?utm_source=chatgpt.com)

Amazon / independent

Fishwife's own planning-role documentation explicitly identifies Amazon, independent retail, wholesale, club and e-commerce as active channels. Exact SKU/account mix is not public, so **all Amazon/independent SKU allocations in our demo must be synthetic**. Greenhouse (https://job-boards.greenhouse.io/shrimpgirlsincdbafishwifetinnedseafoodco/jobs/4434576009?utm_source=chatgpt.com)

This is one of the strongest Fishwife-specific pieces of the demo.

Fishwife publicly defines the Starter Pack as **one tin each of seven products**:

Component
Fly By Jing Smoked Salmon
Gold Label Smoked Salmon
Sardines with Preserved Lemon
Mussels with Sweet Pepper + Garlic
Spicy Tuna
Spanish Lemon Tuna
Smoked Rainbow Trout

The standard pack is currently listed at \$78; the Gift Tin variant is \$88. Fishwife
(<https://eatfishwife.com/products/the-starter-pack>)

That gives us a **real public bundle BOM**.

Which means we can legitimately model:

Retail/account allocation vs DTC bundle assembly.

The component relationships are public facts.

The inventory quantities will be synthetic.

This is much better than inventing an abstract bundle.

Fishwife currently states that **Smoked Rainbow Trout availability ebbs and flows because of responsible sourcing and that it is expected back in stock in early 2027**. Fishwife (https://eatfishwife.com/products/smoked-rainbow-trout-3-pack?_fid=dfc4f83a7&_pos=1&_ss=c&utm_source=chatgpt.com)

That gives us a real-world planning context:

What do you do when one component of a high-value SKU/channel/bundle structure is supply-constrained for months?

We should **not** turn the public DTC "sold out" badge into a claim about network inventory.

Instead:

PUBLIC FACT: constrained availability / expected return early 2027.

SYNTHETIC: remaining network inventory, Costco commitments, Target allocations, bundle requirements, subscription obligations.

That distinction matters.

Sweetgreen ran a nationwide Fishwife Tuna Niçoise Salad using **Albacore Tuna with Spanish Lemon** for two weeks, August 11-24. sweetgreen (https://www.sweetgreen.com/landing/fishwife?utm_source=chatgpt.com)

The planning question becomes:

After a major collaboration ends, what portion of the uplift is durable enough to change the next Spanish production commitment?

Exactly the type of analytical question that cannot be answered by simply knowing a PO exists.

06 Canonical demo timeline

Everything later should use these dates.

Field	Canonical value
Demo planning date	8 Oct 2026
Planning week	Week commencing 5 Oct 2026
Synthetic actuals through	7 Oct 2026
Refresh	8 Oct 2026 · 06:00 PT
Default horizon	13 weeks
Short planning view	4 weeks
Medium planning view	8 weeks
Next ScaleSight review	Monday · 12 Oct 2026
Currency	USD
Base inventory unit	Individual finished-goods tin
Demo type	Illustrative Planning Concept

Monthly S&OP dates, PO dates and internal planning versions are synthetic.

07 Canonical product dataset

These are **not Fishwife's actual numbers**.
They are one coherent operating dataset we can use everywhere.

SKU	OH	Incoming	ETA	Baseline/ wk	Current/ wk	Change	WOC	Synthetic lead	Safety	Demo action
TUN-SL	15,400	12,000	3 wks	4,300	5,600	+30%	2.8	10 wks	3.0	REVIEW BUY
TUN-SP	34,000	18,000	4 wks	6,200	6,500	+5%	5.2	10 wks	3.0	HOLD / WATCH
TUN-OO	42,000	18,000	5 wks	5,200	5,000	-4%	8.4	10 wks	3.0	HOLD
TUN-SG	31,000	12,000	7 wks	3,100	3,500	+13%	8.9	10 wks	3.0	WATCH
SAL-GL	20,000	9,000	4 wks	3,300	3,600	+9%	5.6	6 wks	2.5	HOLD
SAL-FBJ	8,800	6,000	4 wks	2,700	3,000	+11%	2.9	6 wks	2.5	INTERVE NE
TRT-ORIG	4,200	0	-	1,900	1,700	-11%	2.5	constrain ed	4.0	REALLO CATE
SAR-PL	30,000	15,000	6 wks	4,200	4,500	+7%	6.7	9 wks	3.0	HOLD
SAR-HP	28,000	12,000	8 wks	2,500	2,800	+12%	10.0	9 wks	3.0	REDUCE NEXT BUY
MUS-BP	7,800	12,000	5 wks	2,400	3,000	+25%	2.6	10 wks	3.0	RESEQU ENCE
MUS-SPG	29,000	12,000	7 wks	2,700	2,800	+4%	10.4	10 wks	3.0	HOLD
MAC-CHI LI	24,000	10,000	6 wks	2,900	3,100	+7%	7.7	8 wks	2.5	HOLD

Across those 12 modeled SKUs:
Base weekly demand: 41,400 tins
Current synthetic forecast: 45,100 tins
Change: +8.9%
Again: purely illustrative.

08 Canonical executive baseline

I would make these the authoritative story constants later:

Metric	Canonical
Core finished-goods SKUs modeled	12
Primary operating channels modeled	6
Immediate planning decisions	4
Supply-constrained products	1
At-risk incoming / production situations	3
Starter Pack components	7
Current synthetic weekly demand	45,100 tins
Prior-plan weekly demand	41,400 tins
Forecast confidence	Moderate
ScaleSight review cadence	Weekly
Fishwife S&OP	Monthly
System of record	Cin7
Decision owner	Fishwife

The four hero decisions are:

- Spanish Lemon - REVIEW BUY**
- Fly By Jing Salmon - INTERVENE**
- Rainbow Trout - REALLOCATE**
- Basil Pesto Mussels - RESEQUENCE**

09 Synthetic open PO data

We should have a proper PO layer, not merely inventory.

PO	SKU	Qty	Synthetic partner	Original arrival	Current state
FW-2411	Spanish Lemon	12,000	Spain Partner A	Oct 29	AT RISK
FW-2412	Spicy Tuna	18,000	Spain Partner A	Nov 5	CONFIRMED
FW-2420	Olive Oil Tuna	18,000	Spain Partner A	Nov 12	CONFIRMED
FW-1184	FBJ Salmon	6,000	Washington Partner	Nov 5	RECOVERY REQUIRED
FW-2204	Preserved Lemon Sardines	15,000	Galicia Partner	Nov 19	CONFIRMED
FW-2310	Basil Pesto Mussels	12,000	Galicia Partner	Nov 12	CAPACITY REVIEW
FW-2311	Sweet Pepper Mussels	12,000	Galicia Partner	Nov 26	RESEQUENCE CANDIDATE

All names except geographic regions are synthetic.

No actual supplier-performance claims.

10 Embedded planning story

The natural 4-5 minute sequence should be:

Weekly Brief

> “These are the four decisions.”

Demand by Channel

> “Here is why Spanish Lemon may deserve a changed commitment.”

PO Intervention

> “Here is how ScaleSight compares actual responses and cost.”

Allocation / Bundle

> “Here is how one supply constraint propagates across channels and products.”

S&OP Bridge

> “We are preparing exceptions around your existing process.”

Managed Intelligence

> “And this is why ScaleSight remains involved every week.”

By the end, the commercial realization should be:

This isn't a forecasting demo.

This isn't Cin7 replacement software.

This is additional analytical planning capacity wrapped around the system and team Fishwife is already building.

That is the exact experience I would lock before we write the final Wahib specification.

11 Scenario 1 - Spanish Lemon

This should probably be the first analytical scenario.

Public basis: Sweetgreen used Spanish Lemon Tuna nationally August 11-24. [sweetgreen \(https://www.sweetgreen.com/landing/fishwife?utm_source=chatgpt.com\)](https://www.sweetgreen.com/landing/fishwife?utm_source=chatgpt.com)

Synthetic weekly history:

Week	Units	Context
Normal baseline	4,300	pre-event planning baseline
10 Aug	5,900	collaboration
17 Aug	6,400	collaboration
24 Aug	5,200	collaboration ending
31 Aug	4,800	post-event
7 Sep	5,100	post-event
14 Sep	5,250	post-event
21 Sep	5,450	post-event
28 Sep	5,700	post-event
5 Oct	5,600	current run rate

Last four synthetic weeks average:

5,500 tins/week

vs baseline:

4,300

= +27.9% post-event persistence.

The question:

Is four weeks of post-collab persistence strong enough to increase the next Spain commitment?

Scenario choices:

Choice	Demand assumption	Planning interpretation
Stay plan	returns toward 4,300	avoid overcommitting
Current case	holds ~5,500-5,600	next planned run should increase
Upside	retail expands another 15%	reserve additional production capacity now

ScaleSight interpretation:

Moderate confidence. The collaboration is no longer active, yet synthetic demand remains materially above the pre-event baseline. Reserve the next production slot now; review the final quantity against the next retailer reorder cycle before increasing beyond the first MOQ.

That is much stronger than "forecast says +30%."

12 Scenario 2 - Rainbow Trout

This one is extremely defensible because Fishwife itself publicly says availability is constrained into early 2027. Fishwife (https://eatfishwife.com/products/smoked-rainbow-trout-3-pack?_fid=dfc4f83a7&_pos=1&_ss=c&utm_source=chatgpt.com)

Synthetic remaining network inventory:

4,200 tins

Synthetic 4-week unconstrained demand:

6,800 tins

Gap:

2,600 tins

Illustrative protected requirements:

Requirement	Tins
Costco commitments	1,800
Target commitments	1,000
Kroger / wholesale	500
DTC subscriptions	600
QA / service buffer	300
Total	4,200

Recommendation:

REALLOCATE - do not treat this as a replenishment problem.

The system should show:

No reliable new supply before the planning horizon.

Therefore:

- protect confirmed/protected accounts,
- protect committed subscription demand,
- suspend discretionary allocations,
- do not consume scarce trout inventory in lower-priority bundle assembly,
- monitor when the next reliable supply date becomes firm.

This is decision intelligence, not forecasting.

13 Scenario 3 - FBJ Salmon

Synthetic situation:

Current inventory: **8,800**

Current demand: **3,000/week**

Incoming PO: **6,000**

Original arrival: week 4

Updated risk: week 5

If nothing changes:

Projected shortage before the delayed receipt:
approximately **6,200 tins**.

Compare options:

Option	Synthetic incremental cost	Service effect	Trade-off
Accept delay	\$0	~6,200 tin exposure	highest service risk
Full expedite 6,000	+\$8,400	protects almost all demand	expensive
Split 4,000 early / 2,000 standard	+\$5,600	reduces most exposure	remaining allocation decision
Split + temporarily reduce low-priority DTC promotion	+\$5,600	closes projected protected-account gap	best balanced outcome

Illustrative ScaleSight recommendation:

SPLIT 4,000 EARLY + protect retailer commitments. Keep 2,000 on standard freight and temporarily remove incremental DTC promotion demand from the plan.

Decision required:

Approve the recovery option and incremental freight before the supplier cut-off.

This maps almost perfectly to Fishwife's own language around expedite/resequence/split/cut options. Greenhouse (https://job-boards.greenhouse.io/shrimpgirlsincdbafishwifetinnedseafoodco/jobs/4414038009?utm_source=chatgpt.com)

14 Scenario 4 - Mussel resequencing

Public fact: both current mussel flavors are sourced from Chile and packed in Galicia. Fishwife (https://eatfishwife.com/products/mussels-with-basil-pesto?utm_source=chatgpt.com)

For the demo only, assume they share part of a common packing/cannery capacity pool.

Synthetic position:

Basil Pesto

7,800 OH

3,000/week demand

2.6 WOC

12,000 scheduled in 5 weeks

Sweet Pepper + Garlic

29,000 OH

2,800/week demand

10.4 WOC

12,000 also planned

The decision becomes:

If one mussel flavor has 2.6 weeks of cover and the other has 10.4, should Fishwife add total production-or resequence the same capacity?

Synthetic option:

Move **8,000 Basil Pesto tins** forward by three weeks and push the same amount of Sweet Pepper production later.

Illustrative changeover/replanning cost:

\$2,100

Recommendation:

RESEQUENCE rather than add net capacity.

This is exactly the type of conclusion we want ScaleSight to surface.

15 Scenario 5 - Starter Pack

Public BOM = seven actual Fishwife products. Fishwife
(<https://eatfishwife.com/products/the-starter-pack>)

Formula:

Starter Pack capacity = minimum(free inventory of each required component / BOM quantity)

Because each component uses one tin:

capacity = min(free inventory across the seven components)

Illustrative after protected commitments:

Component	Free inventory
Fly By Jing Salmon	4,300
Gold Label Salmon	12,000
Preserved Lemon Sardines	12,000
Sweet Pepper Mussels	14,000
Spicy Tuna	10,000
Spanish Lemon Tuna	3,400
Rainbow Trout	400

Therefore:

Maximum Starter Packs = 400

If DTC planned **1,200 Starter Packs**, the constrained component creates an **800-pack assembly gap**.

The decision is not:

Buy more trout.

Because supply may not be available.

The decision becomes:

Should Fishwife protect standalone/retail trout demand and reduce bundle availability-or consume limited trout inventory inside the Starter Pack?

That is a beautiful Fishwife-specific page.

16 Calculation engine

Everything later should derive from these formulas-not hardcoded display numbers.

Weeks of cover

WOC = current on-hand / current forward weekly demand

Spanish Lemon:

$15,400 / 5,600 = 2.75 > 2.8$ weeks

Demand variance

Demand Variance % = (Current Forecast - Baseline Plan) / Baseline Plan

Spanish Lemon:

$(5,600 - 4,300) / 4,300 = 30.2\%$

Projected inventory

For week t:

Projected Inventory[t] = On Hand + cumulative incoming through t - cumulative demand through t - committed allocation adjustments

Stockout week

First week where:

Projected Inventory ≤ 0

Safety-stock breach

Safety Stock Units = Weekly Forward Demand $\times$ Safety Stock Weeks

First week where projected inventory falls below that amount.

Supply gap before receipt

Supply Gap = $\max(0, \text{Demand Until Reliable Receipt} + \text{Required Safety Stock} - \text{Available Inventory Before Receipt})$

Post-event persistence

Persistence Ratio = Average post-event demand / pre-event baseline

Spanish Lemon example:

$5,500 / 4,300 = 1.279$

= **27.9% above baseline**

Buy cash impact

Incremental Cash = Incremental Buy Quantity $\times$ Synthetic Unit Landed Cost

PO recovery cost

Recovery Cost = Incremental Freight + Changeover/Production Premium + Displacement Cost

Do not hide this behind "AI optimization."

Service units protected

Protected Units = Baseline projected shortage - scenario projected shortage

Bundle capacity

Bundle Capacity = $\min(\text{free component inventory} / \text{BOM quantity})$

S&OP gap

S&OP Gap = Forward Demand Requirement - Confirmed Supply

Then separate it into:

Inventory gap

capacity gap

timing gap

cash gap

Commitment variance

Commitment Variance = Confirmed Buy - Approved Plan

Show both units and cash.

17 Confidence model

Do not use fake percentages such as "94.6% AI confidence."

Use:

LOW / MODERATE / HIGH

Suggested deterministic rules:

Confidence	Condition
HIGH	8+ clean weeks, stable channel behavior, no large active event
MODERATE	4-8 weeks or recent promo/collab/channel change
LOW	<4 weeks, censored sales due stockout, major supply constraint or incomplete data

Spanish Lemon = **MODERATE** because the signal is post-collaboration.

Trout = **LOW demand-learning confidence** because constrained availability can censor true demand.

That distinction is important.

18 Action logic

The app should not create random recommendations.

Action	Logic
HOLD	current commitment remains defensible
WATCH	material signal exists but evidence is not strong enough yet
BUY / PRODUCE	persistent demand + projected shortfall justify additional commitment
REPLENISH	supply required under current plan
REALLOCATE	total supply insufficient but inventory exists elsewhere
RESEQUENCE	capacity exists but is committed to lower-priority product/timing
SPLIT	part of PO should move faster than remainder
EXPEDITE	cost premium justified by service/cash impact
CUT	planned order exceeds revised requirement
INVESTIGATE	signal conflicts or data quality is insufficient
REDUCE NEXT BUY	excess cover without evidence supporting current depth

This action vocabulary feels much closer to the planning job Fishwife is hiring for.

19 Data model

The canonical model should include:

Entity	Critical fields
Product	id, publicName, category, publicPrice, publicSource
SKU	id, productId, unitType, active
Channel	id, name, type
Account	id, channelId, protectedStatus
InventorySnapshot	date, skuld, location, onHand, committed, available
DemandPlan	week, skuld, channelId, baselineUnits, currentUnits
ActualDemand	week, skuld, channelId, units
PurchaseOrder	pold, skuld, qty, readyDate, shipDate, ETA, status, unitCost
ProductionCommitment	skuld, partnerId, qty, slotDate, MOQ
SupplierPartner	id, geography, syntheticLeadTime
Bundle	id, publicName
BundleBOM	bundleId, componentSkuld, qty
PromotionEvent	id, skulds, start, end, type
AllocationRule	account/channel, protectedQty, priority
Scenario	scenarioId, assumptions
ScenarioOption	action, units, cost, serviceImpact
Recommendation	action, reason, confidence, decisionRequired
AnalystReview	reviewedAt, reviewedBy, interpretation
DecisionLog	proposed, approved/rejected, owner, date
Assumption	variable, value, classification, source, reviewDate

That is enough to support every proposed page.

Entity contract and classification

Entity / purpose	Required fields / relationships	Classification / consumers
Product - Public identity and catalog	id, publicName, category, publicPrice, publicSource; relates to SKU.productId	PUBLIC; demo ID synthetic; Demand, Bundles, Assumptions
SKU - Planning unit	id, productId, unitType, active; relates to Product; all skuld fields	Synthetic ID; public name through Product; All planning
Channel - Operating channel context	id, name, type; relates to Account, DemandPlan	Public channel name; synthetic mix; Demand, Allocation

Entity / purpose	Required fields / relationships	Classification / consumers
Account - Priority demand owner	id, channelId, protectedStatus; relates to Channel, AllocationRule	Synthetic policy / public retailer identity; Allocation, S&OP
InventorySnapshot - Dated inventory truth	date, skuld, location, onHand, committed, available; relates to SKU, allocation context	Synthetic; Supply, Allocation, Bundles, PO
DemandPlan - Baseline and forward demand	week, skuld, channelId, baselineUnits, currentUnits; relates to SKU, Channel	Synthetic; Demand, Supply, Scenario, S&OP
ActualDemand - Historical observations	week, skuld, channelId, units; relates to SKU, Channel, event window	Synthetic; Demand, Forecast Learning
PurchaseOrder - Incoming commitment	pold, skuld, qty, readyDate, shipDate, ETA, status, unitCost; relates to SKU, SupplierPartner	Synthetic; absent dates/cost null; Supply, PO, Scenario
ProductionCommitment - Capacity and slot commitment	skuld, partnerId, qty, slotDate, MOQ; relates to SKU, SupplierPartner	Synthetic; missing MOQ null; Supply, S&OP, Scenario
SupplierPartner - Geographic planning context	id, geography, syntheticLeadTime; relates to PO and production partner	Public geography; synthetic identity/lead; Supply, Assumptions
Bundle - Bundle identity	id, publicName; relates to BundleBOM	Public name; synthetic ID; Bundles
BundleBOM - Component dependency	bundleId, componentSkuld, qty; relates to Bundle, SKU	Public composition; Bundles, Allocation
PromotionEvent - Event attribution	id, skulds, start, end, type; relates to SKU, ActualDemand	Public Sweetgreen event; synthetic effects; Demand, Forecast Learning
AllocationRule - Protected reservation	account/channel, protectedQty, priority; relates to Account, Channel, SKU context	Synthetic; Allocation, Bundles
Scenario - Exploratory assumptions	scenarioId, assumptions; relates to Assumption, ScenarioOption	Synthetic; Scenario, PO
ScenarioOption - Alternative action	action, units, cost, serviceImpact; relates to Scenario, Recommendation	Synthetic inputs; derived impact; PO, Scenario
Recommendation - Reviewed analytical response	action, reason, confidence, decisionRequired; relates to Scenario, SKU, AnalystReview	Interpretation; Brief and planning pages
AnalystReview - Specialist review context	reviewedAt, reviewedBy, interpretation; relates to Recommendation	Interpretation; no invented person; All review panels
DecisionLog - Read-only ownership history	proposed, approved/rejected, owner, date; relates to Recommendation	Synthetic only if supplied; no fake approvals; S&OP, Managed Intelligence
Assumption - Lineage and transparency	variable, value, classification, source, reviewDate; relates to Any entity/metric	Explicit four-category classification; Assumptions, Scenario, all tooltips

Sidebar footer:

Managed by ScaleSight

Below in smaller type:

Analysis maintained by ScaleSight. Decisions made with Fishwife.

This follows the strongest part of the NATURANA/Understatement demos while adapting it to Fishwife's operating environment. The previous specs explicitly require the workspace to be the interface to a managed planning service rather than self-service software.

21 Global visual system

Internally call the visual direction:

Fishwife Planning Room

It should feel like:

Fishwife commissioned a private planning environment that ScaleSight prepares for management every week.

Not:

ScaleSight software reskinned with Fishwife colors.

And definitely not:

Fishwife ecommerce website with charts added.

The underlying ScaleSight demo principle remains decision-first, calm and analytical. Your existing specification correctly says the distinction should be between raw system output and a **ScaleSight-reviewed decision**, using cues like “Reviewed by ScaleSight,” “Needs management decision” and “Monitoring next cycle.”

Fishwife does not really have one restrained “corporate blue.” Different products use their own strong color worlds. Their current catalog visibly moves through red, cobalt/blue, yellow, green, pink, orange and black. Creative Review (https://www.creativereview.co.uk/fishwife-illustrated-branding-tinned-fish-danny-miller/?utm_source=chatgpt.com)

So the demo should use a **warm neutral operating canvas + Fishwife accents.**

Element	Direction
Main background	Warm cream / parchment, not pure white
Primary text	Very dark ink / near-black
Main accent	Cobalt/royal blue taken visually from current Fishwife assets
Urgency accent	Tomato/coral red
Watch / assumption	Mustard yellow
Healthy / hold	Sea/olive green
Secondary accent	Pink where appropriate
Borders	Dark ink, slightly stronger than modern SaaS gray borders
Shadows	Almost none
Gradients	None
Glassmorphism	None
Cards	Cream/white with defined ink border
Corners	Mild rounding, not bubbly SaaS cards
Charts	Flat solid colors, high contrast
Decorative illustration	Very restrained

There does not appear to be an official public hex palette, so Wahib should sample colors from current official assets rather than pretend our approximations are official Fishwife brand standards. A third-party design analysis similarly notes there is no published official hex set. Made Good Designs (https://madegooddesigns.com/fishwife-brand-guidelines/?utm_source=chatgpt.com)

For typography, follow the **relationship** visible in Fishwife rather than forcing ScaleSight typography: warm editorial/display serif for important headlines, clean utilitarian sans for tables, values and controls. One current design analysis identifies Recoleta + Albert Sans, but I would have Wahib inspect the live site/assets before hardcoding those exact fonts. Dropmark (https://www.dropmark.com/blog/reverse-engineered-fishwife/?utm_source=chatgpt.com)

Most importantly:

Do not generate new artwork pretending to be Fishwife illustrations.

Use official public product imagery sparingly, especially product thumbnails. The planning UI itself stays original.

I would use roughly:

70% Fishwife visual DNA / 30% planning restraint.

Fishwife appears through:

product imagery

warm cream

strong ink outlines

cobalt/red/yellow/green accents

editorial headline typography

small decorative illustration moments

bold section labels

occasional packaging-inspired bands

ScaleSight appears through:

the analytical hierarchy

recommendation structure

managed-service cues

specialist-review language

decision logic

footer

Managed Intelligence page

So Becca should feel:

“This was built specifically for Fishwife.”

But also:

“ScaleSight is clearly the team behind the analysis.”

That balance is much stronger than a dark-blue ScaleSight dashboard with a Fishwife logo pasted into the corner.

Do **not** let the visual branding make the operational data playful.

The shell can feel Fishwife.

The data must feel serious.

Charts should be calm. Tables should be extremely readable. Numbers should align. Decision badges should always use text + icon, never color alone. The NATURANA specification already requires high contrast, decision-first behavior and no delayed animation or gratuitous visual effects; keep those rules.

For example:

A trout illustration beside the product name = good.

Little cartoon fish swimming through a supply chart = bad.

Packaging-inspired colored header strip = good.

Every table cell being a different Fishwife color = bad.

22 30-second Becca test

This is the most important product requirement.

Seconds 0-5

Becca lands on the page and immediately sees:

FISHWIFE × SCALESIGHT

Weekly Supply Planning Brief

Four changes may require a production, PO or allocation decision this week.

Small context:

Illustrative Planning Concept

Reviewed by ScaleSight · 08 Oct 2026

Next planning review · 12 Oct

She should immediately recognize **her products, channels and operating world.**

Seconds 5-15

She sees four decisions:

Product	Signal	Action
Spanish Lemon Tuna	Post-collab demand remains elevated	REVIEW BUY
Rainbow Trout	Supply constrained across channels	REALLOCATE
FBJ Salmon	Incoming timing creates service exposure	SPLIT PO
Basil Pesto Mussels	Capacity sits in the wrong flavor timing	RESEQUENCE

Not generic KPIs.

Seconds 15-30

She opens one.

She sees:

WHAT CHANGED

WHY IT MATTERS

IF THE PLAN STAYS UNCHANGED

SCALESIGHT RECOMMENDATION

DECISION FISHWIFE NEEDS TO MAKE

And beneath it:

Reviewed by ScaleSight

At that point she should understand:

“This is analysis someone is maintaining for us - not another dashboard I need to figure out.”

That is the success test.

23 Page specification - Weekly Brief

Route:

/

Eyebrow:

FISHWIFE × SCALESIGHT

H1:

Weekly Supply Planning Brief

Subheading:

What changed, what could break the current plan, and which decisions deserve attention this week.

Above the fold

Do **not** begin with a row of eight KPI boxes.

Begin with:

4 decisions need attention this week

Then four decision cards.

Decision card anatomy

Each card contains:

SKU / PRODUCT

small product pack thumbnail

ACTION BADGE

What changed - one sentence

Why now - one sentence

Decision required - one sentence

CTA:

Review decision >

Example:

Albacore Tuna with Spanish Lemon

REVIEW BUY

What changed

Post-collaboration demand remains approximately 28% above the pre-event baseline.

Why now

Current synthetic inventory covers only 2.8 weeks while the next production commitment carries a much longer lead time.

Decision required

Decide whether another Spain production slot should be reserved before the next retailer reorder cycle confirms the full quantity.

Review demand signal >

Then a narrow metric strip beneath the four priorities:

- 12 SKUs monitored
- 45.1K current weekly demand
- 3 supply situations
- 1 constrained product
- Moderate planning confidence

Metrics are supporting context, not the hero.

Below the fold

Section:

What changed since the last planning review

Seven short changes.

Then:

ScaleSight Planning Note

Warm cream/mustard panel.

Aggregate demand moved only 8.9%, but the changes are concentrated in a few SKUs where timing, supply and channel commitments make the impact materially different. The current recommendation is to intervene selectively rather than increase inventory broadly.

Footer tag:

Reviewed by ScaleSight

This creates the “human analytical review” feeling immediately.

Implementation contract: required page fields

Field	Build requirement
Route	/
Commercial purpose / Becca understanding	Use the page intent and exact hierarchy above. Present the planning decision and its trade-off before supporting records.
Eyebrow / H1 / subheading	Exact supplied copy above is authoritative. Where no eyebrow or subheading was supplied, omit it rather than introduce new messaging.
Above-fold hierarchy / values	Render the sequence and canonical numbers above before secondary detail; preserve units and selected context.
Main component / supporting information	Build the specified chart, table, cards or process diagram; expose the underlying assumptions through Assumptions & Data.
Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.
Dependencies	Recommendation, AnalystReview, SKU, DemandPlan, PurchaseOrder

Field	Build requirement
Derived calculations	Executive totals, priority count and forecast variance
Disclaimer	Illustrative Data badge links to /assumptions and provides the full disclaimer. Public context and operating figures are separately labelled.
Managed-service cues	Reviewed by ScaleSight; Needs Fishwife decision; monitoring next cycle where applicable.
Default / empty / error	Use the named default SKU and canonical fixture. Missing input: Not specified in demo source. Empty filtered state: No supplied observations for this context. Error: Analysis unavailable; return to current plan. Never show missing data as zero.
Must not imply	Live integration, autonomous execution, real inventory or supplier failures, or replacement of Cin7, Jampack or Fishwife planners.
Acceptance	Route opens directly; exact supplied copy and numbers appear; dependent outputs update together; keyboard-accessible controls; reset restores default; labels distinguish reviewed and exploratory states.

24 Page specification - Demand by Channel

Route:

/demand

H1:

Which demand signals deserve a change in the plan?

Subheading:

Separate durable demand movement from launches, collaborations, retailer fill and short-term noise.

Default SKU:

Spanish Lemon Tuna

Above fold left:

13-week demand chart.

Series:

Previous plan

Actual / current signal

Current forward assumption

Event marker:

Sweetgreen collaboration

Do not create six forecast lines.

Above fold right:

ScaleSight interpretation

Current signal

5,600 tins/week

Pre-event baseline

4,300

Post-event persistence

+27.9%

Confidence

MODERATE

Then text:

Demand has remained elevated after the collaboration ended. The signal is persistent enough to reserve capacity, but not yet strong enough to treat the entire uplift as permanent demand.

Then:

Recommendation

REVIEW BUY

Reserve the next production slot. Confirm final incremental quantity after the next retailer reorder cycle.

Interaction

SKU selector.

Channel toggles:

ALL

DTC

Target

Whole Foods

Costco / Club

Amazon

Independent / Wholesale

Channel numbers are synthetic where not publicly known.

Changing channels changes:

chart

variance

interpretation

confidence

It must **not automatically invent a different analyst recommendation** unless that state has been explicitly specified.

Implementation contract: required page fields

Field	Build requirement
Route	/demand
Commercial purpose / Becca understanding	Use the page intent and exact hierarchy above. Present the planning decision and its trade-off before supporting records.
Eyebrow / H1 / subheading	Exact supplied copy above is authoritative. Where no eyebrow or subheading was supplied, omit it rather than introduce new messaging.
Above-fold hierarchy / values	Render the sequence and canonical numbers above before secondary detail; preserve units and selected context.
Main component / supporting information	Build the specified chart, table, cards or process diagram; expose the underlying assumptions through Assumptions & Data.
Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.

Main component / supporting information	Build the specified chart, table, cards or process diagram; expose the underlying assumptions through Assumptions & Data.
Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.
Dependencies	PurchaseOrder, ProductionCommitment, SupplierPartner, InventorySnapshot, DemandPlan
Derived calculations	Projected inventory, receipt timing and safety breach
Disclaimer	Illustrative Data badge links to /assumptions and provides the full disclaimer. Public context and operating figures are separately labelled.
Managed-service cues	Reviewed by ScaleSight; Needs Fishwife decision; monitoring next cycle where applicable.

Field	Build requirement
Default / empty / error	Use the named default SKU and canonical fixture. Missing input: Not specified in demo source. Empty filtered state: No supplied observations for this context. Error: Analysis unavailable; return to current plan. Never show missing data as zero.
Must not imply	Live integration, autonomous execution, real inventory or supplier failures, or replacement of Cin7, Jampack or Fishwife planners.
Acceptance	Route opens directly; exact supplied copy and numbers appear; dependent outputs update together; keyboard-accessible controls; reset restores default; labels distinguish reviewed and exploratory states.

26 Page specification - Allocation

Route:

/allocation

This page opens directly on Trout.

Eyebrow:

CONSTRAINED SUPPLY

H1:

When supply cannot cover every channel, what should we protect?

Large product visual:

Smoked Rainbow Trout

Public-context note:

Current public Fishwife messaging indicates responsible-sourcing availability is constrained and expected back in stock in early 2027. Network inventory and allocations below are illustrative.

This public availability language is directly on Fishwife's current site. Fishwife (<https://eatfishwife.com/>)

Above fold

Available illustrative inventory

4,200 tins

4-week unconstrained demand

6,800

Gap

2,600

Then one allocation bar:

COSTCO 1,800

TARGET 1,000

KROGER / WHOLESALE 500

DTC SUBSCRIPTIONS 600

BUFFER 300

Total:

4,200

ScaleSight Recommendation

REALLOCATE

Protect committed accounts and subscriptions first. Remove discretionary trout demand from bundle assembly until reliable replenishment timing returns.

Interaction

One useful toggle:

Include discretionary bundle allocation

OFF / ON

When ON:

the page visibly shows which protected allocation becomes impossible.

Do not give ten sliders.

The interaction should **teach the trade-off**.

Implementation contract: required page fields

Field	Build requirement
Route	/allocation
Commercial purpose / Becca understanding	Use the page intent and exact hierarchy above. Present the planning decision and its trade-off before supporting records.
Eyebrow / H1 / subheading	Exact supplied copy above is authoritative. Where no eyebrow or subheading was supplied, omit it rather than introduce new messaging.
Above-fold hierarchy / values	Render the sequence and canonical numbers above before secondary detail; preserve units and selected context.
Main component / supporting information	Build the specified chart, table, cards or process diagram; expose the underlying assumptions through Assumptions & Data.
Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.
Dependencies	InventorySnapshot, Account, AllocationRule, BundleBOM, Recommendation
Derived calculations	Demand minus inventory; conserved allocation totals
Disclaimer	Illustrative Data badge links to /assumptions and provides the full disclaimer. Public context and operating figures are separately labelled.
Managed-service cues	Reviewed by ScaleSight; Needs Fishwife decision; monitoring next cycle where applicable.
Default / empty / error	Use the named default SKU and canonical fixture. Missing input: Not specified in demo source. Empty filtered state: No supplied observations for this context. Error: Analysis unavailable; return to current plan. Never show missing data as zero.
Must not imply	Live integration, autonomous execution, real inventory or supplier failures, or replacement of Cin7, Jampack or Fishwife planners.
Acceptance	Route opens directly; exact supplied copy and numbers appear; dependent outputs update together; keyboard-accessible controls; reset restores default; labels distinguish reviewed and exploratory states.

27 Page specification - PO Intervention

Route:

/po-intervention

This should be one of the strongest pages in the entire demo.

H1:

When a PO slips, which recovery option is worth its cost?

SKU:

Smoked Salmon with Fly By Jing Chili Crisp

Above fold:

Current position:

8,800 tins available

3,000/week demand

6,000 incoming

Illustrative receipt delay: +1 week

Projected service exposure: 6,200 tins

Then four side-by-side option cards:

Option	Incremental cost	Service effect
ACCEPT DELAY	\$0	6,200 exposed
FULL EXPEDITE	+\$8,400	nearly full protection
SPLIT SHIPMENT	+\$5,600	most exposure removed
SPLIT + REDUCE PROMO	+\$5,600	protected-account gap closed

Recommended option gets a hand-drawn-style outline/highlight, not a glowing SaaS border.

ScaleSight Recommendation

SPLIT

Bring 4,000 units forward, keep 2,000 on standard freight and temporarily remove incremental DTC promotional demand from the protected plan.

Then:

Why this option

Service protected

incremental freight

cash impact

remaining exposure

Important interaction

Allow clicking each option.

The chart changes to show:

inventory trajectory
safety-stock line
incoming receipt
service gap

The recommendation stays visibly labelled:

ScaleSight-reviewed recommendation

This page demonstrates exactly the expedite / resequence / split / cut thinking Fishwife itself is hiring for, without suggesting ScaleSight replaces that planning function.

Implementation contract: required page fields

Field	Build requirement
Route	/po-intervention
Commercial purpose / Becca understanding	Use the page intent and exact hierarchy above. Present the planning decision and its trade-off before supporting records.
Eyebrow / H1 / subheading	Exact supplied copy above is authoritative. Where no eyebrow or subheading was supplied, omit it rather than introduce new messaging.
Above-fold hierarchy / values	Render the sequence and canonical numbers above before secondary detail; preserve units and selected context.
Main component / supporting information	Build the specified chart, table, cards or process diagram; expose the underlying assumptions through Assumptions & Data.
Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.
Dependencies	PurchaseOrder, ScenarioOption, DemandPlan, InventorySnapshot, Recommendation
Derived calculations	Projected shortage, protected units and recovery cost
Disclaimer	Illustrative Data badge links to /assumptions and provides the full disclaimer. Public context and operating figures are separately labelled.
Managed-service cues	Reviewed by ScaleSight; Needs Fishwife decision; monitoring next cycle where applicable.
Default / empty / error	Use the named default SKU and canonical fixture. Missing input: Not specified in demo source. Empty filtered state: No supplied observations for this context. Error: Analysis unavailable; return to current plan. Never show missing data as zero.
Must not imply	Live integration, autonomous execution, real inventory or supplier failures, or replacement of Cin7, Jampack or Fishwife planners.

Field	Build requirement
Acceptance	Route opens directly; exact supplied copy and numbers appear; dependent outputs update together; keyboard-accessible controls; reset restores default; labels distinguish reviewed and exploratory states.

28 Page specification - Bundles & Assembly

Route:

/bundles

H1:

The bundle is only as available as its tightest tin.

Context:

Starter Pack

Use the real seven-product composition already researched.

Above fold

Seven illustrated component tiles.

Each:

product thumbnail

free illustrative inventory

protected elsewhere

available to assembly

Rainbow Trout tile is visibly constrained.

Center:

Starter Pack capacity

400 packs

Planned:

1,200

Gap:

800

Then:

Constrained by Smoked Rainbow Trout

ScaleSight Recommendation

PROTECT COMPONENT

Preserve trout for protected standalone/channel commitments and reduce Starter Pack availability rather than allow bundle assembly to consume constrained supply.

Interaction

A switch:

Protect constrained-account inventory

ON by default.

Turning it OFF demonstrates Starter Pack capacity rising while protected service levels fall.

This is another teaching interaction, not a self-service optimizer.

Implementation contract: required page fields

Field	Build requirement
Route	/bundles
Commercial purpose / Becca understanding	Use the page intent and exact hierarchy above. Present the planning decision and its trade-off before supporting records.
Eyebrow / H1 / subheading	Exact supplied copy above is authoritative. Where no eyebrow or subheading was supplied, omit it rather than introduce new messaging.
Above-fold hierarchy / values	Render the sequence and canonical numbers above before secondary detail; preserve units and selected context.
Main component / supporting information	Build the specified chart, table, cards or process diagram; expose the underlying assumptions through Assumptions & Data.
Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.
Dependencies	Bundle, BundleBOM, InventorySnapshot, AllocationRule
Derived calculations	Floor of minimum free inventory / BOM quantity
Disclaimer	Illustrative Data badge links to /assumptions and provides the full disclaimer. Public context and operating figures are separately labelled.
Managed-service cues	Reviewed by ScaleSight; Needs Fishwife decision; monitoring next cycle where applicable.
Default / empty / error	Use the named default SKU and canonical fixture. Missing input: Not specified in demo source. Empty filtered state: No supplied observations for this context. Error: Analysis unavailable; return to current plan. Never show missing data as zero.
Must not imply	Live integration, autonomous execution, real inventory or supplier failures, or replacement of Cin7, Jampack or Fishwife planners.
Acceptance	Route opens directly; exact supplied copy and numbers appear; dependent outputs update together; keyboard-accessible controls; reset restores default; labels distinguish reviewed and exploratory states.

29 Page specification - Scenario Planning

Route:

/scenario

Do not make this a sandbox with 20 sliders.

H1:

What would actually change the decision?

There should be three prebuilt tabs:

Demand holds higher

Supplier slips

Retailer pulls demand forward

Then only four controls:

Control	Range
Demand change	-20% > +40%
Receipt delay	0 > 6 weeks
Protected demand	numeric
Expedite premium	numeric

Outputs:

Projected stockout

safety-stock breach

units exposed

incremental cash

recommended response

Then a persistent right panel:

ScaleSight view

Under these assumptions, the current recommendation changes from HOLD to SPLIT because the service exposure now exceeds the incremental recovery cost threshold.

Always show:

Illustrative Scenario

Planning assumption

Reviewed recommendation

Reset:

Reset to current plan

Not:

Optimize

Implementation contract: required page fields

Field	Build requirement
Route	/scenario

Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.
Dependencies	Scenario, ScenarioOption, Assumption, DemandPlan, PurchaseOrder
Derived calculations	Inventory trajectory, exposure and dependent scenario costs
Disclaimer	Illustrative Data badge links to /assumptions and provides the full disclaimer. Public context and operating figures are separately labelled.
Managed-service cues	Reviewed by ScaleSight; Needs Fishwife decision; monitoring next cycle where applicable.
Default / empty / error	Use the named default SKU and canonical fixture. Missing input: Not specified in demo source. Empty filtered state: No supplied observations for this context. Error: Analysis unavailable; return to current plan. Never show missing data as zero.
Must not imply	Live integration, autonomous execution, real inventory or supplier failures, or replacement of Cin7, Jampack or Fishwife planners.
Acceptance	Route opens directly; exact supplied copy and numbers appear; dependent outputs update together; keyboard-accessible controls; reset restores default; labels distinguish reviewed and exploratory states.

30 Page specification - S&OP Bridge

Route:

/sop

This page is strategically important because it proves we understand their organization.

H1:

Between monthly S&OP cycles, which changes deserve intervention?

Subheading:

ScaleSight keeps the exceptions current so Fishwife's planning process does not need to reopen every assumption every week.

That sentence is key.

Above fold visual

APPROVED PLAN

/

ACTUAL DEMAND + SUPPLY CHANGES

/

SCALESIGHT EXCEPTION REVIEW

/

4 MATERIAL DECISIONS

/

FISHWIFE DECISION

/

UPDATED COMMITMENT / NEXT S&OP

Then a table:

Decision	Current plan	Change	Proposed response	Decision timing
Spanish Lemon	Current Spain run	persistent uplift	reserve additional slot	before supplier cutoff
Trout	normal allocations	supply constrained	protect priority channels	now
FBJ Salmon	standard receipt	delayed	split shipment	before freight cutoff
Basil Pesto	planned sequence	coverage imbalance	resequence capacity	before cannery lock

At bottom:

ScaleSight does not replace the S&OP process. It prepares the exceptions that deserve a decision between planning cycles.

This is one of the best sentences in the entire demo.

Implementation contract: required page fields

Field	Build requirement

Eyebrow / H1 / subheading	Exact supplied copy above is authoritative. Where no eyebrow or subheading was supplied, omit it rather than introduce new messaging.
Above-fold hierarchy / values	Render the sequence and canonical numbers above before secondary detail; preserve units and selected context.
Main component / supporting information	Build the specified chart, table, cards or process diagram; expose the underlying assumptions through Assumptions & Data.
Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.
Dependencies	DemandPlan, PurchaseOrder, ProductionCommitment, DecisionLog, Recommendation
Derived calculations	Demand minus confirmed supply; units/cash commitment variance
Disclaimer	Illustrative Data badge links to /assumptions and provides the full disclaimer. Public context and operating figures are separately labelled.
Managed-service cues	Reviewed by ScaleSight; Needs Fishwife decision; monitoring next cycle where applicable.
Default / empty / error	Use the named default SKU and canonical fixture. Missing input: Not specified in demo source. Empty filtered state: No supplied observations for this context. Error: Analysis unavailable; return to current plan. Never show missing data as zero.
Must not imply	Live integration, autonomous execution, real inventory or supplier failures, or replacement of Cin7, Jampack or Fishwife planners.
Acceptance	Route opens directly; exact supplied copy and numbers appear; dependent outputs update together; keyboard-accessible controls; reset restores default; labels distinguish reviewed and exploratory states.

31 Page specification - Forecast Learning

Route:

/forecast-learning

H1:

Not every spike deserves a new production plan.

Default:

Spanish Lemon.

Show three shaded periods:

BEFORE EVENT

COLLABORATION

AFTER EVENT

Chart shows the synthetic weekly series.

Then:

What ScaleSight is learning

Pre-event baseline:

4,300

Recent 4-week average:

5,500

Post-event persistence:

+27.9%

Confidence:

MODERATE

Analyst interpretation

The collaboration has ended, but demand remains above baseline. That is stronger evidence than the original event spike alone. We would reserve capacity now while keeping the final incremental quantity under review until another reorder cycle confirms the persistence.

Then second compact example:

A spike we would NOT yet act on

Could use another SKU with one-week retailer pull-forward.

Action:

WATCH

This is important because otherwise every ScaleSight page recommends intervention.

A credible managed planning service sometimes says:

Do nothing yet.

Implementation contract: required page fields

Field	Build requirement
Route	/forecast-learning
Commercial purpose / Becca understanding	Use the page intent and exact hierarchy above. Present the planning decision and its trade-off before supporting records.
Eyebrow / H1 / subheading	Exact supplied copy above is authoritative. Where no eyebrow or subheading was supplied, omit it rather than introduce new messaging.
Above-fold hierarchy / values	Render the sequence and canonical numbers above before secondary detail; preserve units and selected context.
Main component / supporting information	Build the specified chart, table, cards or process diagram; expose the underlying assumptions through Assumptions & Data.
Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.
Dependencies	ActualDemand, PromotionEvent, DemandPlan, AnalystReview
Derived calculations	Post-event average and persistence ratio
Disclaimer	Illustrative Data badge links to /assumptions and provides the full disclaimer. Public context and operating figures are separately labelled.
Managed-service cues	Reviewed by ScaleSight; Needs Fishwife decision; monitoring next cycle where applicable.
Default / empty / error	Use the named default SKU and canonical fixture. Missing input: Not specified in demo source. Empty filtered state: No supplied observations for this context. Error: Analysis unavailable; return to current plan. Never show missing data as zero.
Must not imply	Live integration, autonomous execution, real inventory or supplier failures, or replacement of Cin7, Jampack or Fishwife planners.
Acceptance	Route opens directly; exact supplied copy and numbers appear; dependent outputs update together; keyboard-accessible controls; reset restores default; labels distinguish reviewed and exploratory states.

32 Page specification - Managed Intelligence

Route:

/managed-intelligence

This is the commercial heart of the entire demo.

Use more Fishwife brand personality here, but keep it very clear.

Eyebrow:

MANAGED BY SCALESIGHT

H1:

A decision layer above the systems Fishwife already runs.

Subheading:

Cin7 remains the system of record. Fishwife's existing workflows keep execution moving. ScaleSight maintains the analytical layer around demand, inventory, POs, suppliers and channels - then prepares the few decisions that may need action.

Above the fold

Three large columns.

Column 1

FISHWIFE SYSTEMS & INPUTS

Cin7

Jampack

SPS Commerce

WMS / 3PL

Shopify

Amazon

sales forecasts

supplier updates

promotions / launches

Caption:

Operational truth + business context

Column 2

SCALESIGHT MANAGED ANALYTICAL LAYER

Monitor demand shifts

Reconcile demand vs supply

Detect coverage changes

Track PO exposure

Identify channel conflicts

Stress-test scenarios

Quantify cash/service trade-offs

Specialist review

Prioritise exceptions

Caption:

Which changes are meaningful enough to challenge the current plan?

Column 3

FISHWIFE PLANNING & EXECUTION

Review recommendation

Approve / change / reject

Commit production

Change PO

Reallocate inventory

Execute through existing systems

Caption:

Fishwife retains the decision.

Big callout under the columns:

Not another system for Fishwife to operate.

Supporting copy:

ScaleSight keeps the analytical layer current and brings the exceptions, scenarios and recommendations to the team.

That should be unmissable.

The managed cycle

Below the fold:

1 - REFRESH

Inventory · POs · orders · demand · supplier updates · channel forecasts

/

2 - VALIDATE

Missing data · conflicting dates · unusual changes · censored demand

/

3 - RECONCILE

Demand · supply · inventory · capacity · commitments · cash

/

4 - DETECT

What changed enough to matter?

/

5 - COMPARE

Hold · produce · reallocate · expedite · resequence · split · cut

/

6 - SCALESIGHT SPECIALIST REVIEW

Does the analytical answer make commercial sense?

/

7 - WEEKLY DECISION BRIEF

What changed

why it matters

what happens if nothing changes

ScaleSight recommendation

decision required

/

8 - FISHWIFE DECISION

/

9 - MONITOR OUTCOME

This maintains the same managed-service logic proven in the Understatement specification, where specialist review sits between model output and management recommendation.

What ScaleSight handles

Copy:

ScaleSight maintains the analytical layer, refreshes the planning logic, monitors exceptions, reconciles demand and supply changes, runs scenarios and prepares decision-ready recommendations.

What Fishwife owns

Copy:

Fishwife retains ownership of inventory policy, production commitments, supplier relationships, account priorities and every final commercial decision.

Your ScaleSight planning specialist

Do not invent a fake person.

Copy:

A ScaleSight planning specialist reviews the analytical output through an operations and supply-planning lens, challenges signals that may be temporary or incomplete, incorporates business context and prepares the decisions that deserve management attention.

Secondary:

Supported by ScaleSight's data-science models and planning logic.

Strong bottom statement:

ANALYSIS MAINTAINED BY SCALESIGHT. DECISIONS MADE WITH FISHWIFE.

That is the commercial thesis.

Implementation contract: required page fields

Field	Build requirement
Route	/managed-intelligence

Field	Build requirement
Commercial purpose / Becca understanding	Use the page intent and exact hierarchy above. Present the planning decision and its trade-off before supporting records.

Above-fold hierarchy / values	Render the sequence and canonical numbers above before secondary detail; preserve units and selected context.
Main component / supporting information	Build the specified chart, table, cards or process diagram; expose the underlying assumptions through Assumptions & Data.
Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.
Dependencies	Assumption, AnalystReview, Recommendation, DecisionLog
Derived calculations	No operational calculation; display the reviewed process
Disclaimer	Illustrative Data badge links to /assumptions and provides the full disclaimer. Public context and operating figures are separately labelled.
Managed-service cues	Reviewed by ScaleSight; Needs Fishwife decision; monitoring next cycle where applicable.
Default / empty / error	Use the named default SKU and canonical fixture. Missing input: Not specified in demo source. Empty filtered state: No supplied observations for this context. Error: Analysis unavailable; return to current plan. Never show missing data as zero.
Must not imply	Live integration, autonomous execution, real inventory or supplier failures, or replacement of Cin7, Jampack or Fishwife planners.
Acceptance	Route opens directly; exact supplied copy and numbers appear; dependent outputs update together; keyboard-accessible controls; reset restores default; labels distinguish reviewed and exploratory states.

33 Page specification - Assumptions & Data

Route:

/assumptions

Eyebrow:

TRANSPARENT BY DESIGN

H1:

What is public, what is illustrative, and what a live Fishwife planning cycle would use.

Four large classifications.

PUBLIC INFORMATION

Product names

public prices

public sourcing

retailer assortment where verified

Starter Pack composition

public collaboration events

public system/process information

SYNTHETIC DEMO INPUT

Inventory

sales

forecast

PO quantities

PO timing

cost

MOQ

safety stock

retailer commitments

channel allocations

supplier performance

DERIVED

Weeks of cover

forecast variance

stockout exposure

bundle capacity

service units protected

cash impact

post-event persistence

SCALESIGHT INTERPRETATION

What changed

whether it matters

what should stay unchanged

response alternatives

recommendation

confidence

decision required

Then:

What a 30-day Fishwife pilot would use

Cin7 export

retailer orders / EDI

Shopify / DTC

Amazon

current demand plan

open POs

supplier readiness

costs

inventory policy

Important sentence:

A pilot can begin with existing exports. This demo does not imply a live integration is already deployed.

Implementation contract: required page fields

Field	Build requirement
Route	/assumptions
Commercial purpose / Becca understanding	Use the page intent and exact hierarchy above. Present the planning decision and its trade-off before supporting records.
Eyebrow / H1 / subheading	Exact supplied copy above is authoritative. Where no eyebrow or subheading was supplied, omit it rather than introduce new messaging.
Above-fold hierarchy / values	Render the sequence and canonical numbers above before secondary detail; preserve units and selected context.
Main component / supporting information	Build the specified chart, table, cards or process diagram; expose the underlying assumptions through Assumptions & Data.
Analyst interpretation / recommendation	Use the supplied reviewed copy. Selection of a comparison option is not a change to the reviewed recommendation.
Fishwife decision required	Describe the commercial decision in text. No approval, execution or operational save control.

Field	Build requirement
Interactions	Only interactions specified above. Unspecified data-dependent states must show an explicit missing-input state.
Dependencies	Product, Assumption, SupplierPartner and source metadata on every entity
Derived calculations	Classification and source completeness checks
Disclaimer	Illustrative Data badge links to /assumptions and provides the full disclaimer. Public context and operating figures are separately labelled.
Managed-service cues	Reviewed by ScaleSight; Needs Fishwife decision; monitoring next cycle where applicable.
Default / empty / error	Use the named default SKU and canonical fixture. Missing input: Not specified in demo source. Empty filtered state: No supplied observations for this context. Error: Analysis unavailable; return to current plan. Never show missing data as zero.
Must not imply	Live integration, autonomous execution, real inventory or supplier failures, or replacement of Cin7, Jampack or Fishwife planners.
Acceptance	Route opens directly; exact supplied copy and numbers appear; dependent outputs update together; keyboard-accessible controls; reset restores default; labels distinguish reviewed and exploratory states.

34 Managed service behavior

Use them sparingly, exactly as your existing spec advises.

Good cues:

Reviewed by ScaleSight

ScaleSight recommendation

Needs Fishwife decision

Updated this planning cycle

Planning assumption

Monitoring next cycle

Illustrative data

Do not stamp “ScaleSight AI” everywhere.

Full disclaimer: Public product and company facts are based on publicly available information supplied in the research. Inventory, demand, PO quantities and timing, costs, forecasts, allocation and planning numbers are illustrative and do not represent Fishwife internal data. Recommendations are illustrative demonstrations of the ScaleSight planning workflow. The demo does not imply a live integration is deployed.

Use a global badge plus a focusable tooltip or disclosure, and a persistent Assumptions & Data link. Reviewed by ScaleSight describes the demo narrative, not an actual live planning cycle or named employee.

35 Interaction rules

There should be **less interaction than a normal SaaS product**.

That is intentional.

The strongest interactions are:

1. Open a decision.
2. Change channel/SKU context.
3. Compare PO recovery options.
4. Toggle allocation priority.
5. Test a meaningful scenario.
6. Reset assumptions.

Do **not** create:

editable master data

PO creation

inventory adjustment screens

account setup

user settings

automations builder

notifications

AI chat

workflow configuration

save buttons everywhere

“Approve PO” execution buttons

Those features would accidentally communicate:

“Buy this software and operate it yourself.”

We want:

“ScaleSight prepares this for you.”

State contract: canonical fixtures are immutable. Context selection, comparison selection and scenario assumptions live separately. Reset discards all exploratory overrides. Numeric controls accept finite nonnegative values except demand change (-20% to +40%); delay is an integer 0-6. Reject invalid input inline, retain last valid state and do not change the reviewed recommendation. Toggle labels state the trade-off; controls must not silently change master inventory or protected policy.

36 Data dependency matrix

Page / route	Entities	Calculations / interaction contract
Weekly Brief /	Recommendation, AnalystReview, SKU, DemandPlan, PurchaseOrder	Executive totals, priority count and forecast variance. Use the page-specific analyst copy and only its defined controls.
Demand by Channel /demand	SKU, DemandPlan, ActualDemand, Channel, PromotionEvent, Recommendation	Weekly demand, variance and persistence. Use the page-specific analyst copy and only its defined controls.
Supply Commitments /supply-commitments	PurchaseOrder, ProductionCommitment, SupplierPartner, InventorySnapshot, DemandPlan	Projected inventory, receipt timing and safety breach. Use the page-specific analyst copy and only its defined controls.
Allocation /allocation	InventorySnapshot, Account, AllocationRule, BundleBOM, Recommendation	Demand minus inventory; conserved allocation totals. Use the page-specific analyst copy and only its defined controls.
PO Intervention /po-intervention	PurchaseOrder, ScenarioOption, DemandPlan, InventorySnapshot, Recommendation	Projected shortage, protected units and recovery cost. Use the page-specific analyst copy and only its defined controls.
Bundles & Assembly /bundles	Bundle, BundleBOM, InventorySnapshot, AllocationRule	Floor of minimum free inventory / BOM quantity. Use the page-specific analyst copy and only its defined controls.
Scenario Planning /scenario	Scenario, ScenarioOption, Assumption, DemandPlan, PurchaseOrder	Inventory trajectory, exposure and dependent scenario costs. Use the page-specific analyst copy and only its defined controls.
S&OP Bridge /sop	DemandPlan, PurchaseOrder, ProductionCommitment, DecisionLog, Recommendation	Demand minus confirmed supply; units/cash commitment variance. Use the page-specific analyst copy and only its defined controls.
Forecast Learning /forecast-learning	ActualDemand, PromotionEvent, DemandPlan, AnalystReview	Post-event average and persistence ratio. Use the page-specific analyst copy and only its defined controls.
Managed Intelligence /managed-intelligence	Assumption, AnalystReview, Recommendation, DecisionLog	No operational calculation; display the reviewed process. Use the page-specific analyst copy and only its defined controls.
Assumptions & Data /assumptions	Product, Assumption, SupplierPartner and source metadata on every entity	Classification and source completeness checks. Use the page-specific analyst copy and only its defined controls.

37 Live pilot data requirements

This eventually belongs in Assumptions/Managed Intelligence, but technically we should plan for it now.

Source	Needed
Cin7	item master, BOMs, on-hand, locations, POs, receipts, sales orders, supplier data
Jampack / EDI	retailer PO commitments, shipment/freight status, account timing
Shopify	DTC demand, subscriptions, bundles
Amazon	sales/orders/inventory signals
Sales plan	account/channel forecasts, launches, promotions, pipe fills
Supplier data	capacity, MOQ, readiness, lead times, production dates
Finance	landed cost, inventory valuation, cash constraint
Operations	safety stock policy, protected accounts, target cover
Bundle setup	component BOMs and assembly timing

We do **not** need to claim live integration in the demo. A pilot could begin from exports.
A pilot can begin with existing exports. This demo does not imply a live integration is already deployed.

38 Safe claims / claims to avoid

This is important because Fishwife is sophisticated.

We should never imply:

"Cin7 doesn't plan."

It does more than just inventory records, and Fishwife is explicitly building its operations around it.

Do not say:

"Your team cannot see this."

We don't know that.

Do not say:

"ScaleSight makes the final supply decisions."

Fishwife does.

Do not say:

"We replace your planner."

Bad positioning.

Do not say:

"AI found the optimal answer."

We are showing scenario-supported recommendations.

Do not portray Jampack as a competitor. Jampack is automating **execution and operational glue**; that actually strengthens our argument that Fishwife can keep existing systems and add ScaleSight above them. Jampack AI (https://www.jampack.ai/blog/fishwife-case-study?utm_source=chatgpt.com)

The strongest service statement is:

Cin7 remains Fishwife's system of record. Jampack keeps operational workflows moving. Fishwife's team owns the plan. ScaleSight maintains the analytical layer around that plan-monitoring where demand, supply, channel commitments and cash begin to diverge, comparing the available responses, and preparing the few decisions that deserve intervention.

And:

Not another system for Fishwife to operate.

And:

The planning workspace is the interface to ScaleSight's managed analytical capacity-not the product itself.

This preserves the same important principle used in the NATURANA specification: the workspace is the interface; ScaleSight maintains the analysis and the client retains the commercial decision.

39 Research & data safeguards

There are three things Wahib/ChatGPT Work must not accidentally turn into false facts.

Storefront stock status: volatile. Fishwife currently shows several products as sold out, but DTC status does not prove total network inventory. Fishwife
(https://eatfishwife.com/products/build-your-own-bundle?utm_source=chatgpt.com)

Job descriptions: they describe Fishwife's desired responsibilities and systems, not proof that every process is already fully implemented.

Jampack case study: useful and corroborated by Jack's public post, but detailed efficiency numbers originate from the vendor/customer case study. We should use it to understand system roles, not make ScaleSight sales claims around their exact savings. Jampack AI
(https://www.jampack.ai/blog/fishwife-case-study?utm_source=chatgpt.com)

Phase 1 conclusion

We now have enough source material to build a **very precise Fishwife demo**, and its core story is much clearer than before:

Fishwife does not need another inventory tool. It is actively building the planning function and already has a serious operational stack. The gap we demonstrate is the analytical capacity between "the system says something changed" and "this change is important enough to alter a real production, PO, allocation or cash commitment."

The canonical demo story should therefore revolve around **four real decision patterns**:

Spanish Lemon > is post-collab uplift durable enough to change the next production commitment?

Rainbow Trout > how do we allocate genuinely constrained supply?

Fly By Jing Salmon > when a PO is late, which recovery option is worth its cost?

Mussels > can we resequence existing capacity instead of simply buying more?

And the **Starter Pack BOM** ties all of those decisions together at the assembly/channel level.

This completes the **research/data foundation**. The next step should be **Phase 2: exact UI intent and page-by-page experience**-what Becca should understand within the first 30 seconds, exact hierarchy for every page, what belongs above the fold, exact Managed Intelligence narrative, what interactions Wahib should build, and what must make the workspace unmistakably feel like a managed service rather than SaaS.

40 Developer implementation rules

Use a single versioned fixture module containing products, inventory, demand, POs, events, BOMs, assumptions, reviewed recommendations and source metadata. Each field or grouped record carries classification, source reference and scenario context. Keep product and PO IDs stable and do not infer actual internal identifiers.

Implement pure shared selectors for WOC, variance, inventory projection, shortage, persistence, bundle capacity and recovery cost. Store full precision; round only for display. WOC: one decimal; variance/persistence: one decimal where analytical detail is shown, whole percent where supplied summary copy uses it. Integer tins/packs; USD with explicit incremental label. Use null for missing values and em dash or Not specified in display.

Allocation commitments already included in demand must not be subtracted a second time. Separate unmet demand from negative book inventory; physical inventory is floored at zero, while exposure is tracked independently. A receipt ordering convention must be agreed before stockout dates can be asserted. Date-only ETAs are not interchangeable with week buckets.

Read-only DecisionLog may illustrate proposed / approved / rejected states only if supplied; do not invent approvals. Every UI state keys metrics, chart series and explanatory copy by SKU, channel, horizon and scenario. No browser or backend execution integrations are needed for the concept.

Desktop priority: laptop layouts with readable numbers, right-aligned quantitative columns, stable sticky table headers and responsive wrapping. On narrow screens stack decision panels and allow horizontal table scrolling. Status requires text plus a visual marker; no color-only encoding. Disable gratuitous motion. All routes must support direct entry. No duplicated calculation code inside route components.

41 QA / acceptance criteria

DATA: all 12 IDs and seven canonical PO rows exist exactly once. Canonical BOM has seven components at one tin each. Snapshot and scenario scopes are explicit. Repeated values reconcile or are labelled unresolved source conflicts.

CALCULATIONS: TUN-SL $15,400 / 5,600 = 2.75$, displayed 2.8. Demand variance = 30.2326%, displayed 30.2%. Four-week mean = $(5,250 + 5,450 + 5,700 + 5,600) / 4 = 5,500$. Persistence uplift = 27.90698%, displayed 27.9%. Trout demand gap = $6,800 - 4,200 = 2,600$. Allocation sum = 4,200. Bundle capacity = 400; gap = 800. Mussel moved quantity = 8,000 with unchanged total capacity and \$2,100 replanning cost.

SCENARIOS: option changes update receipts, trajectory, service exposure and cost consistently. Demand changes do not mutate original PO IDs. No reviewed recommendation is regenerated from an unspecified threshold. Missing costs/priority/receipt dates are shown as missing, never inferred.

POSITIONING: all planning routes label illustrative inputs; Cin7 is system of record, Jampack execution support, Fishwife decision owner. Managed Intelligence includes the nine-step cycle and exact ownership statements. No autonomous approval/execution controls.

UX: run the 0-5, 5-15 and 15-30 second Becca test. Four decision cards precede KPI strip. All eleven routes reachable. All specified toggles, selectors and scenario options work or visibly report source-dependent missing inputs. Reset restores canonical state and clears local exploratory overrides.

VISUAL / ACCESSIBILITY: cream editorial shell, ink text and strong borders, no gradients or glassmorphism; inspect at laptop width. Text contrast meets WCAG AA; focus is visible; table labels remain legible; statuses use text; charts have legends, units and accessible summaries.

RELEASE: resolve the implementation questions below for a fully interactive build. Preserve source assertions where explicitly canonical; never hide a conflict by altering data.

42 Final build checklist

- [] Canonical source module and classification registry.
- [] Eleven routes and sidebar groups.
- [] Four hero decision drawers with five-section narrative.
- [] Demand and forecast-learning series with event annotation.
- [] Seven-PO commitment timeline and read-only detail.
- [] Trout allocation and bundle dependency contexts separated.
- [] Four recovery comparison options with exact supplied costs.
- [] Three scenario tabs, four bounded controls, clear reset.
- [] S&OP bridge and full managed cycle.
- [] Full disclaimer accessible everywhere.
- [] Shared formulas, deterministic reviewed states, validation and missing-input behavior.
- [] Numeric source conflicts resolved or clearly disclosed before prospect delivery.
- [] Desktop visual review and keyboard check complete.

A Public product catalog

Fishwife's current DTC assortment and Build Your Own Bundle expose a broad tinned-fish portfolio, including tuna, salmon, trout, mussels, sardines, anchovies and mackerel. The bundle system supports 9-, 12- and 15-tin configurations plus subscriptions. Fishwife (https://eatfishwife.com/pages/bundles?utm_source=chatgpt.com)

For the actual planning model, I recommend **12 core finished-goods SKUs**. That is enough complexity without making the prospect inspect 40 rows.

Demo ID	Public product	Public DTC pack price	Public supply context
TUN-SL	Albacore Tuna with Spanish Lemon	\$32 / 3-pack	Bay of Biscay + South Africa; packed in Spain
TUN-SP	Albacore Tuna in Spicy Olive Oil	\$32 / 3-pack	Bay of Biscay + South Africa; packed in Spain
TUN-OO	Albacore Tuna in Olive Oil	\$32 / 3-pack	Spanish packed tuna
TUN-SG	Albacore Tuna with Soy Ginger	\$32 / 3-pack	Bay of Biscay + South Africa; Spanish cannery
SAL-GL	Gold Label Smoked Salmon	\$36 standard 3-pack	Kvarøy Arctic; canned in Washington
SAL-FBJ	Smoked Salmon with Fly By Jing Chili Crisp	\$39 standard 3-pack	Kvarøy Arctic; Washington cannery
TRT-ORIG	Smoked Rainbow Trout	\$33 standard 3-pack	Denmark; micro-cannery near Copenhagen
SAR-PL	Sardines with Preserved Lemon	\$32 / 3-pack	Cornwall/Iberian fisheries; Galicia
SAR-HP	Sardines with Hot Pepper	\$32 / 3-pack	Cornwall/Iberian fisheries; Galicia
MUS-BP	Mussels with Basil Pesto	\$32 / 3-pack	Southern Chile; packed in Galicia
MUS-SPG	Mussels with Sweet Pepper + Garlic	\$32 / 3-pack	Southern Chile; packed in Galicia
MAC-CHILI	Slow Smoked Mackerel with Chili Flakes	\$32 / 3-pack	Northeast Atlantic; public retailer material identifies Scotland packing

Those sourcing structures are based on Fishwife's current product pages. Fishwife (https://eatfishwife.com/products/albacore-tuna-with-spanish-lemon-3-pack?utm_source=chatgpt.com)

Two additional public SKUs can exist in the catalog but don't need to drive the first demo story:

Cantabrian Anchovies in EVOO - \$27 / 3-pack, and **Smoked Rainbow Trout with Red Chimichurri - \$33 / 3-pack**. Fishwife (https://eatfishwife.com/products/cantabrian-anchovies-in-extra-virgin-olive-oil?utm_source=chatgpt.com)

Important: these are **our safe internal demo IDs**, not claims about Fishwife's real internal SKUs.

This is where the demo becomes Fishwife-specific.

Target

Fishwife currently identifies these products at Target:

Smoked Salmon with Fly By Jing, Rainbow Trout, Spanish Lemon Tuna, Spicy Tuna, Olive Oil Tuna, Mackerel and Preserved Lemon Sardines. Fishwife
(https://eatfishwife.com/pages/target-store-locator?utm_source=chatgpt.com)

Whole Foods

Current Fishwife Whole Foods assortment displayed publicly includes Spicy Tuna, Olive Oil Tuna, Mackerel and Preserved Lemon Sardines. Fishwife
(https://eatfishwife.com/pages/whole-foods-store-locator?utm_source=chatgpt.com)

Costco

Fishwife lists an **exclusive Costco Spicy Tuna trio pack** and Smoked Rainbow Trout in select Costco locations. Fishwife (https://eatfishwife.com/pages/costco-store-locator?utm_source=chatgpt.com)

Kroger / Murray's

Current public Fishwife Kroger assortment includes Fly By Jing Salmon, Rainbow Trout, Mackerel, Preserved Lemon Sardines and Spicy Tuna. Fishwife
(https://eatfishwife.com/pages/kroger-store-locator?utm_source=chatgpt.com)

DTC

Fishwife has standalone tins, curated bundles, 9/12/15 Build Your Own Bundles and subscription frequencies of 30, 60 or 90 days. Fishwife
(https://eatfishwife.com/products/build-your-own-bundle?utm_source=chatgpt.com)

Amazon / independent

Fishwife's own planning-role documentation explicitly identifies Amazon, independent retail, wholesale, club and e-commerce as active channels. Exact SKU/account mix is not public, so **all Amazon/independent SKU allocations in our demo must be synthetic**. Greenhouse (https://job-boards.greenhouse.io/shrimpgirlsincdbafishwifetinnedseafoodco/jobs/4434576009?utm_source=chatgpt.com)

This is one of the strongest Fishwife-specific pieces of the demo.

Fishwife publicly defines the Starter Pack as **one tin each of seven products**:

Component
Fly By Jing Smoked Salmon
Gold Label Smoked Salmon
Sardines with Preserved Lemon
Mussels with Sweet Pepper + Garlic
Spicy Tuna
Spanish Lemon Tuna
Smoked Rainbow Trout

The standard pack is currently listed at \$78; the Gift Tin variant is \$88. Fishwife
(<https://eatfishwife.com/products/the-starter-pack>)

That gives us a **real public bundle BOM**.

Which means we can legitimately model:

Retail/account allocation vs DTC bundle assembly.

The component relationships are public facts.

The inventory quantities will be synthetic.

This is much better than inventing an abstract bundle.

B Canonical synthetic dataset

These are **not Fishwife's actual numbers**.
They are one coherent operating dataset we can use everywhere.

SKU	OH	Incoming	ETA	Baseline/ wk	Current/ wk	Change	WOC	Synthetic lead	Safety	Demo action
TUN-SL	15,400	12,000	3 wks	4,300	5,600	+30%	2.8	10 wks	3.0	REVIEW BUY
TUN-SP	34,000	18,000	4 wks	6,200	6,500	+5%	5.2	10 wks	3.0	HOLD / WATCH
TUN-OO	42,000	18,000	5 wks	5,200	5,000	-4%	8.4	10 wks	3.0	HOLD
TUN-SG	31,000	12,000	7 wks	3,100	3,500	+13%	8.9	10 wks	3.0	WATCH

SAR-HP	28,000	12,000	8 wks	2,500	2,800	+12%	10.0	9 wks	3.0	REDUCE NEXT BUY
MUS-BP	7,800	12,000	5 wks	2,400	3,000	+25%	2.6	10 wks	3.0	RESEQU ENCE
MUS-SPG	29,000	12,000	7 wks	2,700	2,800	+4%	10.4	10 wks	3.0	HOLD
MAC-CHI LI	24,000	10,000	6 wks	2,900	3,100	+7%	7.7	8 wks	2.5	HOLD

Across those 12 modeled SKUs:
Base weekly demand: 41,400 tins
Current synthetic forecast: 45,100 tins
Change: +8.9%

Again: purely illustrative.
This should probably be the first analytical scenario.

Public basis: Sweetgreen used Spanish Lemon Tuna nationally August 11-24. [sweetgreen \(https://www.sweetgreen.com/landing/fishwife?utm_source=chatgpt.com\)](https://www.sweetgreen.com/landing/fishwife?utm_source=chatgpt.com)

Synthetic weekly history:

Week	Units	Context
Normal baseline	4,300	pre-event planning baseline
10 Aug	5,900	collaboration

Week	Units	Context
17 Aug	6,400	collaboration
24 Aug	5,200	collaboration ending
31 Aug	4,800	post-event
7 Sep	5,100	post-event
14 Sep	5,250	post-event
21 Sep	5,450	post-event
28 Sep	5,700	post-event
5 Oct	5,600	current run rate

Last four synthetic weeks average:

5,500 tins/week

vs baseline:

4,300

= +27.9% post-event persistence.

The question:

Is four weeks of post-collab persistence strong enough to increase the next Spain commitment?

Scenario choices:

Choice	Demand assumption	Planning interpretation
Stay plan	returns toward 4,300	avoid overcommitting
Current case	holds ~5,500-5,600	next planned run should increase
Upside	retail expands another 15%	reserve additional production capacity now

ScaleSight interpretation:

Moderate confidence. The collaboration is no longer active, yet synthetic demand remains materially above the pre-event baseline. Reserve the next production slot now; review the final quantity against the next retailer reorder cycle before increasing beyond the first MOQ.

That is much stronger than "forecast says +30%."

Public BOM = seven actual Fishwife products. Fishwife
(<https://eatfishwife.com/products/the-starter-pack>)

Formula:

Starter Pack capacity = minimum(free inventory of each required component / BOM quantity)

Because each component uses one tin:

capacity = min(free inventory across the seven components)

Illustrative after protected commitments:

Component	Free inventory
Fly By Jing Salmon	4,300
Gold Label Salmon	12,000
Preserved Lemon Sardines	12,000
Sweet Pepper Mussels	14,000
Spicy Tuna	10,000
Spanish Lemon Tuna	3,400
Rainbow Trout	400

Therefore:

Maximum Starter Packs = 400

If DTC planned **1,200 Starter Packs**, the constrained component creates an **800-pack assembly gap**.

The decision is not:

Buy more trout.

Because supply may not be available.

The decision becomes:

Should Fishwife protect standalone/retail trout demand and reduce bundle availability-or consume limited trout inventory inside the Starter Pack?

That is a beautiful Fishwife-specific page.

C Canonical PO table

We should have a proper PO layer, not merely inventory.

PO	SKU	Qty	Synthetic partner	Original arrival	Current state
FW-2411	Spanish Lemon	12,000	Spain Partner A	Oct 29	AT RISK
FW-2412	Spicy Tuna	18,000	Spain Partner A	Nov 5	CONFIRMED
FW-2420	Olive Oil Tuna	18,000	Spain Partner A	Nov 12	CONFIRMED
FW-1184	FBJ Salmon	6,000	Washington Partner	Nov 5	RECOVERY REQUIRED
FW-2204	Preserved Lemon Sardines	15,000	Galicia Partner	Nov 19	CONFIRMED
FW-2310	Basil Pesto Mussels	12,000	Galicia Partner	Nov 12	CAPACITY REVIEW
FW-2311	Sweet Pepper Mussels	12,000	Galicia Partner	Nov 26	RESEQUENCE CANDIDATE

All names except geographic regions are synthetic.

No actual supplier-performance claims.

D Formula reference

Everything later should derive from these formulas-not hardcoded display numbers.

Weeks of cover

WOC = current on-hand / current forward weekly demand

Spanish Lemon:

$15,400 / 5,600 = 2.75 > 2.8$ weeks

Demand variance

Demand Variance % = (Current Forecast - Baseline Plan) / Baseline Plan

Spanish Lemon:

$(5,600 - 4,300) / 4,300 = 30.2\%$

Projected inventory

For week t:

Projected Inventory[t] = On Hand + cumulative incoming through t - cumulative demand through t - committed allocation adjustments

Stockout week

First week where:

Projected Inventory ≤ 0

Safety-stock breach

Safety Stock Units = Weekly Forward Demand $\times$ Safety Stock Weeks

First week where projected inventory falls below that amount.

Supply gap before receipt

Supply Gap = $\max(0, \text{Demand Until Reliable Receipt} + \text{Required Safety Stock} - \text{Available Inventory Before Receipt})$

Post-event persistence

Persistence Ratio = Average post-event demand / pre-event baseline

Spanish Lemon example:

$5,500 / 4,300 = 1.279$

= **27.9% above baseline**

Buy cash impact

Incremental Cash = Incremental Buy Quantity $\times$ Synthetic Unit Landed Cost

PO recovery cost

Recovery Cost = Incremental Freight + Changeover/Production Premium + Displacement Cost

Do not hide this behind "AI optimization."

Service units protected

Protected Units = Baseline projected shortage - scenario projected shortage

Bundle capacity

Bundle Capacity = $\min(\text{free component inventory} / \text{BOM quantity})$

S&OP gap

S&OP Gap = Forward Demand Requirement - Confirmed Supply

Then separate it into:

Inventory gap

capacity gap

timing gap

cash gap

Commitment variance

Commitment Variance = Confirmed Buy - Approved Plan

Show both units and cash.

Implementation: persistence ratio and uplift are different: $\text{ratio} = \text{average} / \text{baseline}$; displayed uplift = $(\text{ratio} - 1) \times 100$. Do not label 1.279 as 27.9% without conversion. Demand baseline of zero: variance undefined, not infinity. Zero weekly demand: WOC undefined; no divide-by-zero.

E Source notes

Primary supplied documents: Fishwife Phase 1 (Pasted text dated 20261007-223224), Fishwife Phase 2 (Pasted text (2)(5)), explicit creation prompt (Pasted text (3)(2)). Structural benchmark only: ScaleSight NATURANA Technical Specification Wahib v1(4).

Research links retained in the sections refer to source-provided public research. Product prices, storefront availability, job postings and assortment may change. Do not represent them as freshly reverified on the PDF creation date. Strip tracking parameters when storing a source registry. Public supplier geography is distinct from synthetic supplier identity.

Implementation Questions / Needs Confirmation

Q1 - Aggregate demand verified. The 12 canonical SKU rows total 41,400 baseline and 45,100 current; aggregate uplift is 8.9% rounded. This check passes; no replacement values are required.

Q2 - Trout scenario scope. Allocation reserves all 4,200 tins, including the 300 buffer, while bundle example has 400 free trout tins. Define a separate bundle context snapshot or confirm which reservation changes. Do not subtract both contexts from one inventory pool.

Q3 - FBJ chronology. 6,200 exposure equals $5 \times 3,000 - 8,800$ before a delayed week-5 receipt. Actual Nov 5 / Nov 12 date arithmetic from Oct 8 is 4 / 5 elapsed weeks. Confirm receipt-before-demand convention and early 4,000/full 6,000 receipt dates. Without these, exact inventory trajectories and near-full protection are unsupported. Split-only arithmetic leaves 2,200 exposure under this simple window; protected-gap closure requires the unspecified promo reduction/protected demand amounts.

Q4 - Mussel resequencing. Specify early receipt date for 8,000, remaining 4,000 date, and displaced Sweet Pepper 8,000 date. Do not assume pushing supply later means transferring finished tins between flavors.

Q5 - Scenario engine inputs. Missing: landed costs, MOQ, recovery-cost threshold, protected-demand baseline, promo reduction quantity, allocation displacement priority, exact scenario presets and optional retailer pull-forward series. The illustrative HOLD-to-SPLIT sentence cannot become a universal deterministic rule without a supplied threshold.

Q6 - PO coverage. SKU table includes incoming for TUN-SG, SAR-HP and MAC-CHILI but no corresponding canonical PO IDs. Keep these as aggregate incoming records, not fabricated POs. Supply timeline stage dates (production/ready/transit) are absent; show unspecified until confirmed.

Q7 - Channels and history. Six operating channels are named but no channel-level unit split is supplied. Do not divide equally or invent allocations. Channel toggle may show no supplied observations pending a reviewed synthetic fixture. Spanish Lemon source provides nine dated weeks plus baseline, not a full 13 dated observations; remaining weeks must be marked no supplied observation.

Q8 - Action vocabulary. REVIEW BUY, INTERVENE and PROTECT COMPONENT are source-specific reviewed headings; normalize executable analytical action enums separately as BUY review, SPLIT and REALLOCATE respectively. Preserve the exact page headings, do not create autonomous decision actions. RESEQUENCE CANDIDATE is a PO status, not an action.

Q9 - Weekly changes. Seven short changes are requested but exact seven-sentence copy is not supplied. Use only supported facts and avoid inventing last-review events. Exact brand hex/font files require official asset inspection and font availability confirmation; PDF styling is an approximation, not official Fishwife standards.

Q10 - Supplier cutoffs / safety logic. Exact decision deadlines and supply partner readiness are not supplied. Use before supplier/freight/cannery cutoff text, not fabricated timestamp. A 6,200 service shortage excludes safety stock; it must not be labelled the formula's supply gap including safety reserve.

Consistency audit result: SKU baseline sum = 41,400; current sum = 45,100; row-derived uplift = 8.9%. Executive source asserts 41,400 / 45,100 / +8.9%. Row totals reconcile with the executive baseline; this check passes.
